

NWA Block Cavity Tray – CE Marking

From the 1st July 2013 under the Construction Products Regulation (CPR) over 400+ Building Products were required to carry the CE mark covering a broad range of construction products. Numerous roofing products including but not limited to Roof Coverings, certain waterproofing products, roof windows and upstands are covered under the legislation.

North West Aluminium Cavity Trays do not require a CE Certification as they are not covered by a harmonised European standard (hEN) or need to conform to a European Technical Assessment (ETA) for which has been issued for it.

NWA welcomes the introduction of improved testing, certification and oversight of construction products. NWA look forward to being able to provide a CE mark with all our products along with any necessary testing due to the quality of our products.
